

# ACCELERATING CLIENT ONBOARDING

We created a customized digital worker to meet the challenges of a global tech client – empowering them to onboard high volumes of new workers quickly.

TOGETHER WE'RE  
LIMITLESS

Kelly Fusion is a suite of people-first automated work solutions that reduce time and labor-intensive tasks, enabling businesses and employees to deliver elevated results and enhanced talent experiences.

## Challenge:

A leading technology company with a large global workforce looked to Kelly to process around 700 new-hire onboarding requests every month. Onboarding processes included complex data review, system updates, and screening activity – all under significant time pressure to ensure workers were quickly available to join an intensive training program.

## Solution :

We built a digital worker featuring 5 custom automations to centralize hybrid onboarding processes and timecard processing. This worker automatized time and labor-intensive processes such as validating electronic requisition data and background information and obtaining timekeeping reports and validating them against approved ranges.

## Results:

Operational efficiency has increased, allowing us to effectively meet the client's unique hiring needs. The automated solution also delivered significant onboarding cycle time reduction.
